Chapter 486: The Creation of Inner Multiverses

As Castellion Arisium sat upon his Throne of Eternity, the very nature of existence bent to his will. His whitish-silver skin shimmered, his sixty million wings pulsed, and the golden divine jewels embedded in his body glowed with unfathomable power.

With a mere thought, he expanded his divine body, making it a boundless realm of creation itself. Within him, an infinite cosmos began to form.

The Birth of Inner Multiverses

Each breath Castellion Arisium exhaled became a new reality. Each pulse of his three divine hearts sent waves of creation energy, birthing entire multiverses within him.

Billions of inner multiverses emerged, each containing a billion universes—an infinite expanse filled with galaxies, stars, and civilizations. These were not mere illusions, nor were they fragile worlds waiting to collapse. They were as real as the Godverse itself, woven from his divine essence.

Every inner multiverse had its own laws of reality, crafted uniquely by Castellion Arisium. Some were bathed in eternal light, while others existed in a delicate balance between creation and destruction.

Some followed the laws of time, while others transcended such concepts, existing in a perpetual now.

Some bore mortal civilizations, destined to thrive and evolve, while others housed celestial beings, serving as new dominions for his ever-expanding legions.

Each inner multiverse was a testament to his supreme dominion—a cosmos within a god.

Decillions of Clones – The Infinite Legion

But Castellion Arisium did not stop at creation alone. His mind, infinitely vast, could extend across all that existed. And so, he multiplied himself.

Decillions of clones emerged, each possessing a fraction of his divine power—yet even a fraction of Castellion Arisium was enough to surpass all things.

Each clone was placed within an inner multiverse, tasked with watching over its countless universes. They would be the guardians, rulers, and supreme authorities of their respective dominions.

Some clones took the forms of celestial gods, guiding their realms with wisdom. Some took the forms of warriors, leading divine armies in endless conquest. Others remained unseen, existing beyond perception, ensuring that their realities followed the grand design.

And at any moment, Castellion Arisium could merge with any of them, experiencing all of creation through his infinite avatars.

A Body That Contains Everything

With billions of inner multiverses and decillions of clones, Castellion Arisium had transcended the very definition of godhood. His divine body was no longer just a physical form—it was an omniversal domain, an entire reality unto itself.

He no longer merely ruled the multiverse.

He had become the multiverse.

And within him, new stories, new civilizations, and new destinies would forever unfold.
